The Minnesota Prescription Monitoring Program (PMP) is a tool to be used by prescribers and pharmacists to assist in managing their patient’s care. It contains information provided by Minnesota licensed pharmacies and prescriber dispensers. Pharmacies and prescribers who dispense from their office submit prescription data to the PMP system for all Schedules II, III, IV and V controlled substances, butalbital and gabapentin dispensed in or into Minnesota. This protected health information is collected and stored securely. Minnesota licensed prescribers and pharmacists, and their delegated staff may be authorized to access information from the PMP database. The program was implemented to promote public health and welfare by detecting diversion, abuse and misuse of prescriptions for controlled substances as defined in Minnesota Statutes Section 152.126.
